Highlights/Advantages on similar Pistol Platforms: the new Lion's Den LDI Pistol platform encompasses a revolutionary 2-Axis Trigger/Sear engagement and release, rather than the 1-Axis traditional engagement found on all competitor pistols currently available on the world's market. This system, not only allows a 95% pre-cock of the firing pin, even if maintaining a totally safe Double Action configuration, including an Automatic Firing Pin Safety, Side Lever Safety and Trigger Chain Automatic Disconnect Safety, but making the trigger pull and Sear release/shot actuation crisp and predictable as if the system was a Single Action configuration. This Trigger Chain System has passed the most stringent US and NATO Countries approvals and it is currently engaged with a number of global Armed Forces.
